INFORMATION DISCLOSURE STATEMENT (IDS) DRAFT - REVISED

Purpose

This is a preliminary IDS/prior-art review aid based on the uploaded base package. A patent professional should verify bibliographic data, obtain copies where required, and determine what should actually be cited in an IDS.

Preliminary references

US20220351628A1 - automated mission planning/execution for UAVs.

US7451023B2 - collaborative system for teams of unmanned vehicles.

US12061673B1 - multi-agent planning and learning-based autonomy.

US20230280762A1 - autonomous vehicle mission planning and multi-asset collaborative operations.

US20200348696A1 - control of multi-drone fleets using temporal-logic objectives.

US10976752B2 - autonomous UAV operation, planning, coordination, and adaptation to uncertainty/faults.

US20250239091A1 - sensor fusion for autonomous machines using machine learning.

US20240210963A1 - failure prediction and risk mitigation in small uncrewed aircraft systems.

Potential combination points for counsel review

Confidence/provenance-aware sensor fusion coupled to planning.

Deterministic safety-envelope gating of AI-generated flight behavior.

Health-prediction-driven update of planning constraints before trajectory selection.

Capability-scoped authenticated mission contracts.

Degraded-link local/remote mission-state reconciliation using authority and provenance.

Evidence logging tying model identity, confidence, health, provenance, and safety decisions.

Important limitation

This list is not represented as a complete patentability search or a legal conclusion.
